

Why choose an EMR when you can have so much more?

Changing the Way Doctors Feel about EMRs

Patient Care Manager ■ Patient HealthPort ■ Community Viewer ■ Physician Exchange

The AMCIS Network takes care of everything for you...

Patient Care Manager

The software system that provides all of the functionality of the AMCIS Network in the doctor's office. Every aspect of patient care is simplified and made more efficient; from scheduling the appointment to completing the note and billing the patient. It is a customizable product that can be implemented using a gradual modular method.

- Increase revenue with improved insurance reimbursement due to better coding and billing
- Reduce overhead and expenses while improving efficiency with less paper and charts, pulling/filing and storage space
- Increase patient load while reducing staff workload
- Better patient care and increased patient and staff satisfaction

Patient HealthPort

A secure patient portal to the AMCIS Network. Patients can communicate with your office, schedule appointments, request refills, view lab results, demographics and clinical history, etc. Patients enter their own data, instead of requiring physicians and staff to do so.

- Dramatic reduction in call volumes
- Elimination of lost correspondences and charts
- Dramatic reduction in waiting times for responses to questions
- Providers see the question in the patient's own words
- Shift control of care back to the physician and their patient
- Past medical history entered by patients populates physician notes in prose

Community Viewer

An enterprise solution allowing secure access to patient medical records for approved medical facilities in the medical community.

- Hospital admitting staff has instant access to patient's medical record
- Specialist's office retrieves records without calling PCP
- Dramatic reduction in the time required to share records

Physician Exchange

Allows secure exchange of patient data and interoffice communication between practices in The AMCIS Network.

- Medical records received from other physicians without delays, security risks, and costs of copying and faxing records
- Better continuity of care and increased patient satisfaction

The AMCIS Network lets you put the human element back into patient care

Functionality

Prescriptions

- Medication lists are electronically accessible by patient, provider/staff, and authorized health care providers.
- Prescription requests and refills are handled with a few simple clicks.
- AMCIS sends and receives prescriptions directly to and from pharmacies.

Labs

- Provider/staff can order lab studies from Quest, Labcorp or in-house labs with a few simple clicks.
- Patients, provider/staff, and other authorized health care providers can view lab results with comments.
- Patients can print requisitions for ordered labs.

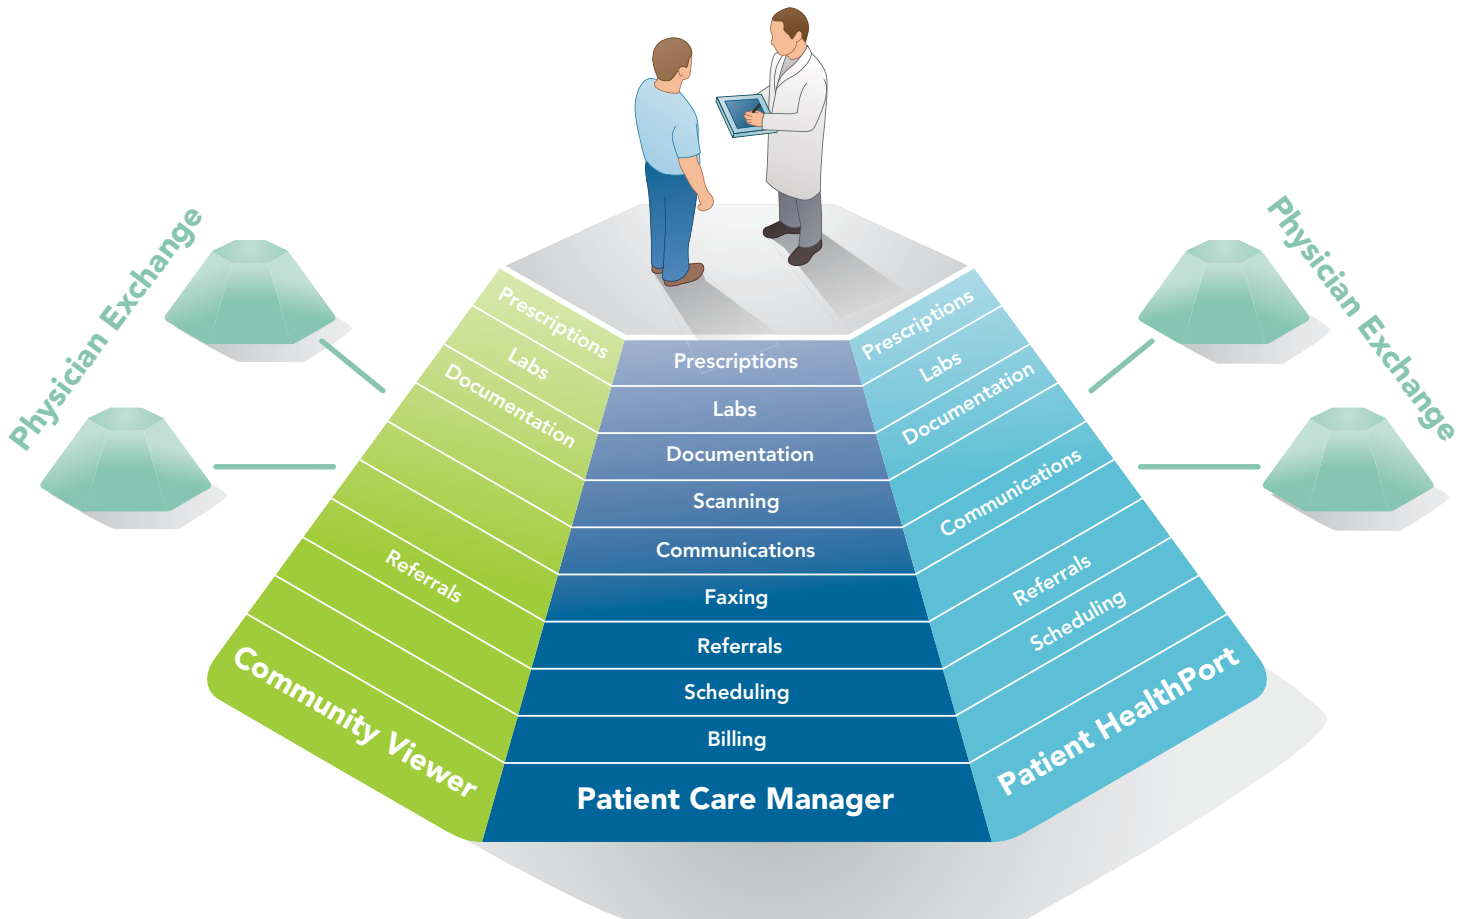

Clinical Documentation

- Patients enter their past medical and surgical history, family and social history, allergies, meds and review of systems, which all go directly into the physician's note in prose, without a computer-generated appearance.
- Notes can be entered in multiple ways: voice recognition, pick lists, templates, free-edit typing, transcription, and free-form hand writing.
- A great proportion of the note can be pre-entered by staff or by the patient using the AMCIS Healthport.
- Other authorized providers can view providers notes to ensure that they provide the best possible care.

Scanning

- Documents can be scanned in multiple locations and easily directed to the appropriate person electronically.
- Patients can view scanned documents that are sent to them by staff.

...so you can spend your time practicing the art of medicine

"At first I didn't have to stay late to finish my charts; then I had an extra hour during the day to do additional consults; and now we're reducing our front office staff in half. I tell you, I'm a believer."

John Dormois, M.D., Cardiologist, Tampa, FL

Communications

- Providers and staff can communicate electronically and securely within the office, or to patients.
- Patients can communicate securely with the practice online.
- Providers and staff can communicate electronically to other offices in The AMCIS Network right from the patient's eChart.

Faxing

- Fax any document or any combination of documents directly out of AMCIS with a few simple clicks.
- Incoming faxes drop directly into AMCIS so that staff can direct the documents to the appropriate person electronically. No scanning of incoming faxes is required.

Referrals

- Providers/staff can send referral forms electronically with a few simple clicks. Specialists can track the number of referrals remaining for their patients. Referring provider's notes located in the patient's eChart are easy to view.
- Patients can request referrals on-line and print their referral forms on-line.
- Other authorized providers can view notes from the referring providers.

Scheduling

- Based on rules set by the practice, patients can schedule appointments online much in the same way that airplane flights are reserved. This is true appointment scheduling, not just e-mailing back and forth between the patient and the office.
- Viewing who created or moved appointments is easy so there is no need to wonder who changed a scheduled appointment.

Billing

- The AMCIS Patient Care Manager can either interface with your existing billing system or a new billing system can be provided with it.
- The provider or billing staff can approve and confirm the E&M level and CPT/ICD9 codes for the patient encounters, which are then sent to the billing system.

Everywhere Healthcare™

Find out what all the buzz is about...

- **Customizable** to fit the needs of your practice
- **Gradual modular implementation**
no nightmare conversions; your timetable is our timetable
