

## Watchdog® System Requirements

### General System Requirements:

- 128 MB of RAM minimum
- Hard Drive with at least 10 MB of free space
- Color printer  
(Colorflex approved printer recommended)
- Serial connector and serial cable required if Watchdog will watch data through serial port.
- Windows 98/NT (SP4+)/2000/XP

### Application Features

- Watchdog prints to either the Intaglio or LabelsAnywhere.com label printing application.
- Colorflex will assist in the creation of data file for your printing needs.

Watchdog® is at the heart of the Colorflex family of filing technology solutions. It is the industry leading way to completely automate the label printing process.

**WATCHDOG**  
DATA POLLING SOFTWARE

Colorflex® is a division of EDPH, LLC

*A Better Way To Print Labels*

*WATCHDOG seamlessly takes information from virtually any data source directly to the label print engine.*

# Automation is 1...2...3... Steps Away

WatchDog is Colorflex's automatic data polling software. It is the preferred method of printing on-demand labels for most hospitals, law firms, banks and other servicing applications because it completely automates their label printing process.

Most companies know that they could be more efficient and more accurate if only their label printing could use data that already resides in their system. Watchdog printing **reduces the labor** involved in manually entering data and virtually **eliminates human errors** that are made when data must be entered multiple times.

WatchDog provides two methods for managing data-Serial or ASCII.

- The ASCII method watches for a text file.
- The Serial method watches for data across a serial cable.

After finding a data file, WatchDog can perform the following functions:

- Work with multiple data sources, designs and printers
- Exclude duplicate records
- Clean data by removing extraneous characters or records
- Transform data according to rules you specify
- Route data from one or more sources to any number of printers. This means you can print labels for each department or location at their own printers!

Users can also use WatchDog to re-print individual labels or entire print runs.

WatchDog provides an easy, expandable method for managing your enterprise data and makes label printing effortless.

## 1 Setup

WatchDog will be configured to find data where ever you specify.

## 2 Watch

When a new file is placed in the specified directory, WatchDog matches to user-defined criteria, transforms it based on your rules, and processes the information for label printing.

## 3 Send

Once the file is processed by WatchDog, your labels will print at a specified time and location, using your custom-built label designs.

Why key in data more than once?

Let WatchDog use data that already resides in your system!
