

## HIGH SPEED SCANNING

Enterprise Document Capture

### Automate Scanning

### Integrate with Business Applications

### Support Remote Sites

### Improve Quality

### Simplify Support

#### iSynergy® Document Scanning

Automated. Paperless. Integrated. Getting rid of paper is what ScanSpeed and iScan are designed to do! The most labor intensive component of any document management solution lies in the scanning and indexing of documents. Paper is received and processed in many different ways and iDatix has created ScanSpeed and iScan to handle all forms of scanning requirements in the most efficient way. Whether your scanning needs are single documents at one location or complex documents from remote sites across the extended enterprise, iSynergy scanning modules will ensure the document capture process is simple to use.

iScan and ScanSpeed are completely integrated into the iSynergy suite of business automation products. They are easy to set up, simple to configure, and effortless to support.

#### ScanSpeed - Production Scanning

ScanSpeed is designed for production level scanning where documents can be batched for maximum throughput. Using the ISIS interface, ScanSpeed is compatible with over 350 scanners including: Fujitsu, Canon, Kodak, Bell&Howell, Ricoh, Panasonic, AGFA, BancTec and more ranging in speeds from 20 pages per minute (PPM) to over 240 PPM.

#### Easy to Use

The simple graphical user interface is user friendly and intuitive making ScanSpeed very easy to use. Powerful scanning profiles can be created to automate the capture functionality including batch level indexing. User-defined profiles allow for flexible scanner configuration management even for the most complex requirements ensuring a high quality capture process with very little end-user training.

#### Powerful, Scalable

ScanSpeed is 100% scalable and can be implemented in virtually any scanning environment. An iSynergy Solution can use one or hundreds of scanners. ScanSpeed provides batch indexing capabilities and scanner operator tracking to support remote scanning activities while ensuring quality in the process. And because ScanSpeed is pre-integrated with the entire iSynergy suite, mass deployment and implementation is a breeze!

#### iScan - Interactive Scanning

iScan is designed for interactive scanning or scanning on demand and is perfect for small volume scanning at the desktop level. iScan is typically used when scanning and indexing occur at the same time such as: walk-up scanning (encounter based scanning), exception processing, trailing document capture, document modification or fax processing.

#### Integration

iScan can be embedded into third-party products to allow easy integration of scanning into key-line-of-business applications. Index values can be passed to iScan or retrieved from an external database to eliminate manual or duplicate keying. iScan allows you to put scanning into any application: Accounting, LOS, ERP, CRM or in-house solutions. With iScan, it is fast and easy.

#### Exception Processing

Exception processing is a challenge in any automated solution, but with iScan exceptions are processed with little effort. Correcting mis-scans, reordering pages, adding trailing or missing documents, processing imported documents, sifting through faxes are all effortless with iScan. iScan can also be used as a high-speed indexing station using external database look-ups to automated data entry.

### Improve Scanning Quality

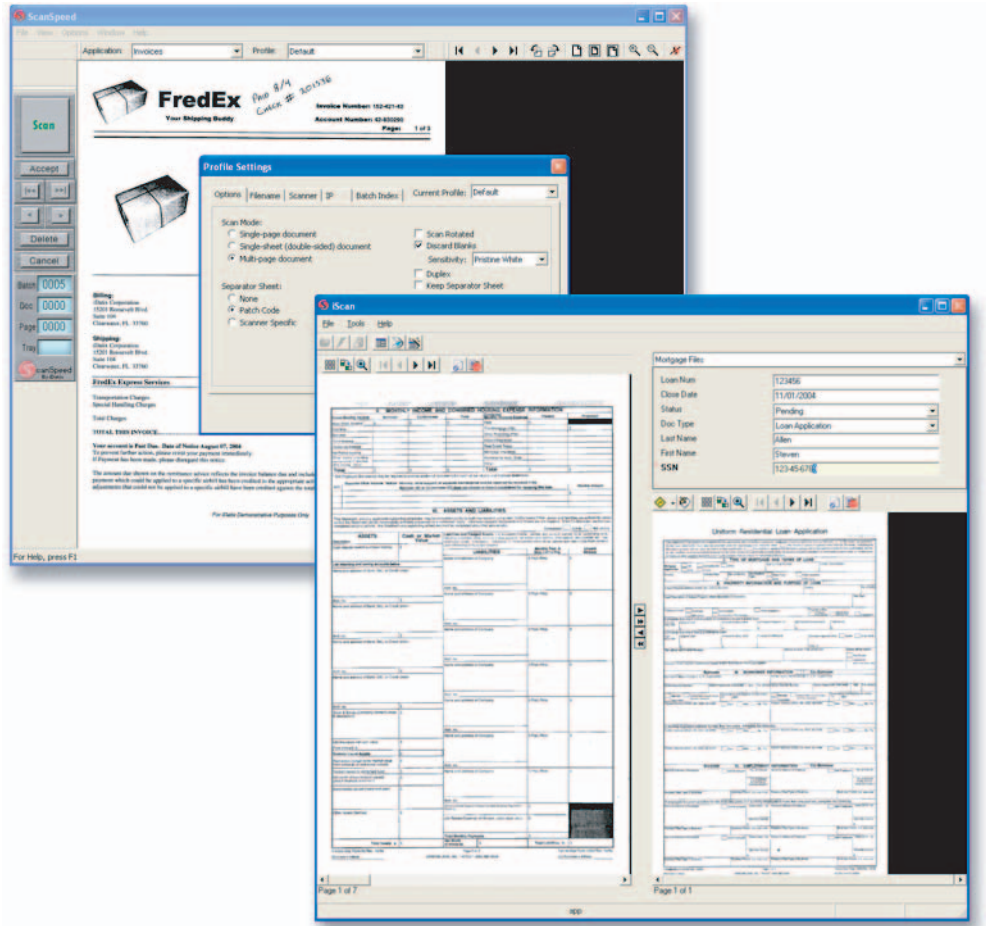

ScanSpeed uses a robust suite of image-processing filters to maximize the quality of the scanned documents. Each filter is designed to perform a specific enhancement task such as de-skew, de-speckle or black border removal. These filters can be used individually or in sequence to deliver the optimal digital result.

### Increase Workflow Productivity

With built-in quality review and control, ScanSpeed and iScan empower you to inspect documents as they are scanned or upon the completion of scanning a batch of documents. Document review controls allow you to move through the batch and review the quality of documents before they are saved. These controls increase productivity by allowing you to quickly recover from paper-jams or operator errors without impacting workflow.

### Gain the Competitive Advantage

The global economy has entirely changed the way competitive companies do business. Some operations are conducted in-house, whereas others may take place overseas. With the iSynergy Scanning Solution, resources can be used wherever they are available. Work teams and scanners may each be in different locations, but ScanSpeed and iScan give full distributed control of the scanning processes as if they were all under a single roof.

### The ScanSpeed / iScan Solution

- Maximize Scanner Productivity
- Optimize Throughput
- Intuitive Scanner Controls
- Fully Scalable
- Reduce Presorting
- Color and B&W Support
- Improve Image Quality
- Fully Audited

### The iDatix Difference

iDatix delivers technology that offers dramatic and measurable results. Our products immediately increase productivity, reduce costs and exceed expectations. iDatix is committed to delivering effective business solutions that have a measurable return for our clients.

iSynergy empowers the enterprise to effectively manage the vast amounts of unstructured data that fill business operations. With iSynergy Business Automation products, information becomes highly available to any authorized user.

iSynergy: The smarter way to manage information!
